## Katepwa

Clone Name: P. "OPW-180H-86"

Gender:	Male
Parentage:	Mother: P. Walker (Open pollinated P. deltoides var. occidentalis) Father: Unknown
Origin:	AAFC-PFRA Shelterbelt Centre, Indian Head, SK
Breeding Y Field Select Released:	

a second s					
Morphological Traits	Description				
Trunk	Slightly curved, multi-stemmed				
Crown Form	Slightly spreading with central trunk				
Branch Angle	50-60°				
Budburst	Mid-Spring				
Budset	Mid-Fall				
Leaf	Deltoid with a broadly straight base and broad long acuminate tip; lower surface grayish green, coarsely serrate; petiole yellow green, less than half length of blade				
Twig	Cylindrical, greenish to light brown; linear vertically oriented lenticels; buds out- curved, ovoid, gummy; leaf scars three- lobed				
Bark	Rough, fissured and furrowed after 8 – 10 years				

Period and an and a state of the second seco			
Trait Characteristics	Low	Medium	High
Fall/Spring Hardiness			Х
Drought resistance			Х
Sunscald Susceptibility	Х		
Flood Tolerance		Х	
Septoria Resistance			Х
Rust Resistance		Х	
Growth Rate			Х
Rooting Capacity		Х	
Recommendations	Description		
Utilization	Agroforestry, landscaping, biomass, reclamation, phytoremediation		
Soil	Grows well on a variety of soils, pH <8		
Plant Hardiness Zone	Zones 1-4		
Notes	Good stoolbed and steckling production, Longevity > 40yrs.
